

Unifying Account Reconciliations and Transaction Matching

[This webinar invite first appeared on OneStreamSoftware.com](#)

Tuesday, September 20 | 11 - 12 PM ET

Having an efficient financial close process is essential to producing timely and accurate results to internal and external stakeholders. Automation is a big factor in improving the efficiency of the financial close process. Why? Because automation of tedious and repetitive tasks speeds the process and frees up Finance teams to focus on more value-added activities.

Join us for this webinar to see a live demonstration on the unification of account reconciliations and transaction matching within the OneStream Financial Close solution. You will learn how to match transactional data from multiple sources and quickly resolve differences to accelerate account reconciliations and the close process.

In this webinar, we will cover:

- Leveraging a single downloadable solution with single install and uninstall, with one source of the truth and one point of maintenance across Account Reconciliations and Transaction Matching
- Unifying and maintaining Account Reconciliations and Transaction Matching by leveraging existing dimensionality to identify which transactions relate to corresponding reconciliations
- Transactional level support may be created from Transaction Matching and pushed to multiple reconciliations, OR detail specific to a reconciliation may be pulled from Transaction Matching to a reconciliation
- How to create and unify tables for Account Reconciliations and Transaction Matching within a consistent and seamless user experience
