

OneStream® Power BI Connector

The Reporting & Analysis Challenge

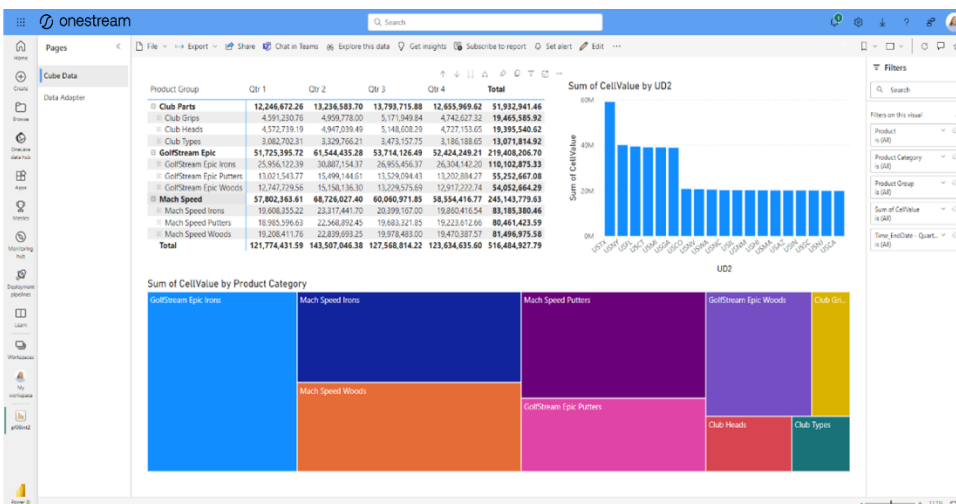

Organizations continue to make material investments in standard corporate Business intelligence (BI) solutions like Power BI. Why? To empower business users to explore organizational data, create visualizations, and provide flexible analysis and reporting for financial and operational insights. Unfortunately, these solutions lose the financial intelligence needed to frame the analysis. Plus, they require ongoing data movement and replication across multiple data sources and tools to keep the data fresh. These solutions, in turn, introduce latency in the data Finance teams need to analyze corporate performance consistently and accurately. Until now...

Value Proposition

OneStream's Power BI Connector provides a no-code, seamless integration to quickly connect and consume trusted financial and operational data from OneStream within Power BI. To ensure the highest levels of trust and confidence in your data, the Power BI Connector maintains OneStream user-specific security and your financially intelligent hierarchies across dimensions. That capability provides 100% consistency for enhanced reporting, analysis, and visualization to reach more users and get more value from OneStream.

Capabilities & Benefits

- **Unleash Trusted Data:** Unleash and unlock trusted, financially intelligent data for enhanced reporting, analysis, and visualizations across your current Power BI investments and reach more users across the organization.
- **Reduce Data Management:** Reduce manual data management, data replication and maintenance with seamless, secure, no-code integration — enabling you to effortlessly publish live, financially intelligent and governed reports and dashboards across your Power BI investments.
- **Empower Decision-Makers:** Deliver accurate, financially intelligent data as real-time as you need — on any device — to ensure Power BI business users have trusted, timely access to financial and operational data and tools to get insights into corporate performance and more informed decision-making.

KEY BENEFITS

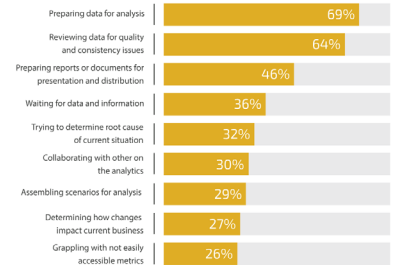

- Trusted Data
- Reduce Data Management
- Empower Decision-makers
- Reduce Latency
- Reach More Users

DID YOU KNOW

69% of financial analysts' time is spent on preparing data for analysis.

Majority of Time Spent Analyzing Data

64% cite reviewing data for quality and consistency

“Reporting is one area in which departments can boost productivity by streamlining the acquisition and management of data that goes into periodic and ad hoc reports, facilitating their design and layout, and enabling self-service reporting by non-analysts, especially those outside of the finance department.”
